Link your internal IT system with SkillsHub™

Integration

When you make a significant investment in a sophisticated internal IT system you want it to contain every grain of employee detail. You don't want to enter the same data into more than one system. You want an integrated solution.

That's why IT systems integration is a core feature of Skillshub™. We can link SkillsHub™ with your corporate intranet to ensure a seamless flow of information between systems. You enter your data as usual and our technology does the rest.

Alternatively, if full integration is not possible, we can arrange for a tightly scheduled data feed to run between the two systems.

Benefits of integrating the two systems

- Ensures parity of information across systems.
- Frees resources tied up with simple data entry task.
- Delivers a reliable timetable for making changes.
- Guarantees security and integrity of data.

How does it work in practice?

If you opt for full integration everything works like clockwork. Using a dedicated path, data is exchanged in real-time ensuring parity between your IT system and our learning management system, SkillsHub™.

If you choose regular data feeds, the system, runs to an agreed schedule, and passes information securely across the two systems so records can be updated. A confirmation report is then despatched.

Certain clients, under the terms of their own security policies, will need to host the application internally. We can arrange for you to have a non-hosted service by installing software on your intranet in accordance with any specific internal guidelines.

Will integration save you time and money?

Two chemical firms have bought new e-learning systems. One has chosen a solution that is fully integrated with its existing system; the other operates a stand alone system.

Option A: Stand Alone System

Chemical firm A must:

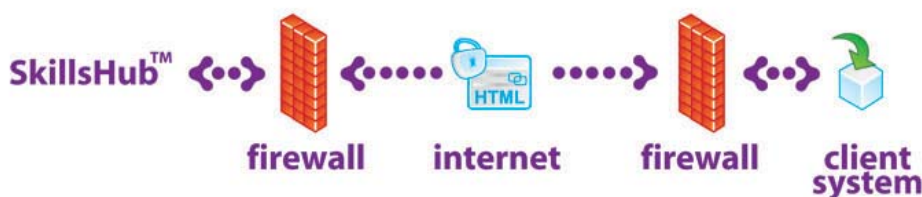

1. Prepare information for update to internal systems.
2. Send written updates to a time pressed IT team.
3. Check for errors between systems.
4. Repeat task

Option B: Integrated System

Once the data feed has been installed chemical firm B must:

1. Sit back and relax as the training records are updated automatically.

If you respect firm B, as they will be spending more time on core training tasks, and saving time and money, then contact us on 0845 130 5140.

absolutely. train smarter, act faster.
